Ideation Phase

Empathize & Discover — Empathy Map Canvas

Date	27 October 2026
Team ID	Not provided
Project Name	Global Fuel Prices & Taxation (2020–2026)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map helps identify what a representative user says, thinks, does, and feels while working with a project. For this project, the persona is illustrative and represents someone exploring global fuel prices and taxation; it is not based on formal interviews.

Primary Persona: Fuel Market Researcher / Policy Analyst

Goal: Compare petrol, diesel, and LPG prices across countries, regions, income levels, and years, and understand how taxation patterns relate to fuel prices.

SAYS	THINKS
• “I need to compare fuel prices across countries without checking many separate tables.” • “I want to see how prices have changed from 2020 to 2026.” • “Can I compare tax percentages with petrol prices?”	• Which regions have higher average fuel prices? • How do petrol, diesel, and LPG differ? • Is there an observable relationship between tax and petrol price?
DOES	**FEELS**
• Uses the world map to explore country-level values. • Compares regional averages and income-level groups. • Reviews trend lines, tax charts, and dashboard filters.	• May feel overwhelmed by a large dataset. • Wants comparisons to be consistent and easy to interpret. • Feels more confident when charts make patterns visible.

User Need

A clear interactive dashboard that supports comparisons by country, region, income level, fuel type, and date.

Key Insight

A map, regional bar charts, a 2020–2026 trend chart, and taxation visualizations make the data easier to explore than a raw table. The charts can reveal associations, but they do not by themselves prove that taxation causes a particular fuel price.
