Project Design Phase-II
Data Flow Diagram & User Stories

Date	27 October 2026	**Team ID**	Not provided
Project Name	Global Fuel Prices & Taxation (2020–2026)	**Maximum Marks**	4 Marks

Data Flow Diagrams:

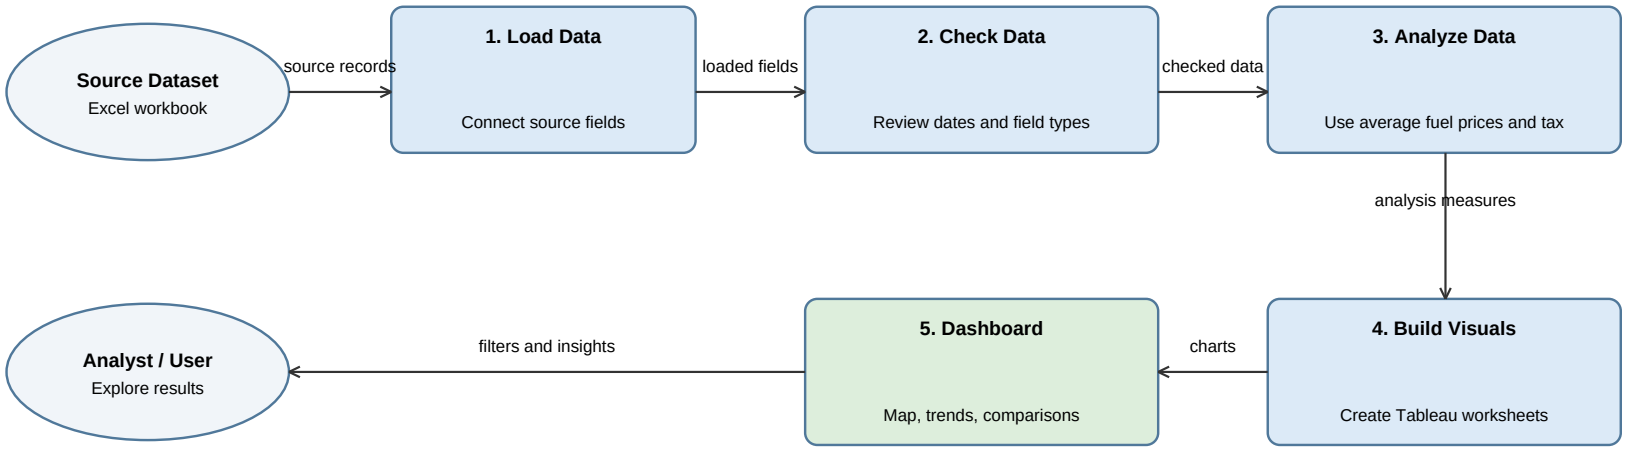

A Data Flow Diagram (DFD) represents how information moves through the project. In this project, fuel-price and taxation data are loaded from the source spreadsheet, checked and prepared for analysis, then explored through Tableau worksheets and the dashboard.

DFD Symbol Legend

Symbol	Name	Description
Oval / rounded shape	**External entity**	A person or source outside the analysis process that supplies data or uses the results.
Rectangle with number	**Process**	A step that transforms or analyzes information, such as checking fields or creating visualizations.
Solid rectangle	**Data store**	A place where data is kept, such as the source Excel workbook or saved Tableau workbook.
Labeled arrow	**Data flow**	The movement of information between the source dataset, analysis steps, and dashboard.

DFD Level 0: Global Fuel Prices & Taxation (2020–2026)

Source spreadsheet → data checks → fuel-price and taxation analysis → Tableau dashboard.

Note: This diagram describes the documented Tableau workflow; it does not claim SQL/MySQL automation was implemented.

User Stories

User stories for the Global Fuel Prices & Taxation dashboard.

User Type	Functional Requirement (Epic)	Story ID	User Story / Task	Acceptance Criteria	Priority	Release
Fuel Market Researcher	Global Overview	USN-1	As a fuel market researcher, I can view the global map and headline fuel-price measures, so that I can quickly understand country-level variation.	Map displays country-level petrol-price data and key measures are readable.	High	Sprint 1
Policy Analyst	Regional Comparison	USN-2	As a policy analyst, I can compare average petrol prices by region, so that I can identify regional differences.	Regional chart uses average petrol price and supports sorting.	High	Sprint 1
Energy Researcher	Fuel Price Trends	USN-3	As an energy researcher, I can review petrol, diesel, and LPG price trends from 2020 to 2026, so that I can identify changes over time.	Trend chart displays the three fuel measures against the date timeline.	High	Sprint 1
Tax Analyst	Taxation Analysis	USN-4	As a tax analyst, I can compare countries by average tax percentage, so that I can identify higher and lower taxation levels in the dataset.	Tax chart ranks countries by average tax percentage and labels values.	High	Sprint 1
Fuel Market Researcher	Diesel Comparison	USN-5	As a fuel market researcher, I can compare average diesel prices across regions, so that I can understand how diesel prices vary geographically.	Regional diesel chart uses AVG(Diesel Usd Liter) and displays region labels.	High	Sprint 2
Fuel Market Researcher	LPG Comparison	USN-6	As a fuel market researcher, I can compare average LPG prices across regions, so that I can explore differences in household fuel costs.	Regional LPG chart compares regions using average LPG price.	Medium	Sprint 2

User Stories

User stories for the Global Fuel Prices & Taxation dashboard.

User Type	Functional Requirement (Epic)	Story ID	User Story / Task	Acceptance Criteria	Priority	Release
Economic Researcher	Income-Level Comparison	USN-7	As an economic researcher, I can compare average petrol prices by income level, so that I can explore differences among country groups.	Chart displays income groups with average petrol price.	Medium	Sprint 2
Policy Analyst	Tax vs Petrol Price	USN-8	As a policy analyst, I can explore tax percentage alongside petrol price, so that I can examine whether the variables appear associated.	Scatter plot compares tax percentage and average petrol price without claiming causation.	High	Sprint 2
Dashboard User	Interactive Filtering	USN-9	As a dashboard user, I can filter the overview by region and income level, so that I can focus on countries relevant to my analysis.	Region and Income Level filters update relevant dashboard views and can be reset.	Medium	Sprint 2
Data Analyst	Data Validation	USN-10	As a data analyst, I can inspect the source fields and date range before analysis, so that charts use consistent data.	Fields are recognized correctly and date values support the 2020–2026 trend view.	High	Sprint 1
Project Reviewer	Workbook Review	USN-11	As a project reviewer, I can view the eight worksheets covering maps, comparisons, trends, and taxation, so that I can review the analysis from several angles.	Workbook contains eight named worksheets and each opens with its intended visualization.	Medium	Sprint 3
Dashboard Maintainer	Workbook Management	USN-12	As a dashboard maintainer, I can save and reopen the Tableau workbook, so that the analysis remains available for review.	Saved workbook opens with worksheets and dashboard views intact.	High	Sprint 3
