Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	Not specified
Team ID	Not provided
Project Name	Global Fuel Prices & Taxation (2020–2026)
Maximum Marks	4 Marks

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority
1	**Data Access & Integration**	Connect Tableau to the Excel dataset containing Country, Income Level, Region, Subsidy Level, Date, Brent Crude USD, and petrol, diesel and LPG prices, along with Tax Percentage.	High
2	**Data Preparation**	Check field names and data types, confirm the date field is usable, assign a geographic role to Country, and review missing or inconsistent values before analysis.	High
3	**Fuel Price & Tax Analysis**	Calculate average petrol, diesel and LPG prices and average tax percentage. Compare results by country, region, income level and date, and examine price trends from 2020 to 2026.	High
4	**Visual Analytics & Dashboard**	Build Tableau worksheets for the global petrol map, regional petrol comparison, fuel-price trends, taxation comparison, diesel and LPG regional comparisons, petrol price by income level, and taxation versus petrol price. Combine the views in an overview dashboard.	High
5	**User Interaction & Analysis**	Allow users to explore the dashboard with Region and Income Level filters, sort charts, read labels and tooltips, and compare the fuel-price patterns shown in the views.	Medium
6	**Data Refresh & Reporting**	Refresh the Excel source when updated, check that worksheets reflect the latest records, and save or export the Tableau workbook and dashboard for review.	Medium

NFR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	Use clear titles, readable labels, consistent formatting and simple Region and Income Level filters so users can explore the dashboard with minimal guidance.
NFR-2	**Data Security**	Keep the source spreadsheet and Tableau workbook under the owner's control. Share exported reports or workbook copies only with intended reviewers.
NFR-3	**Reliability**	Use the correct fields and average aggregation for price comparisons. Check chart labels and date trends against the source data, and save a stable workbook copy.
NFR-4	**Performance**	Keep worksheets focused and avoid unnecessary marks or decorative elements so the dashboard remains readable and responsive during filtering.
NFR-5	**Availability**	Keep the Tableau workbook saved locally and retain an exported PDF or image of the dashboard when a shareable review copy is needed.
NFR-6	**Scalability**	The workbook can be updated with additional countries or dates when compatible records are added to the source dataset; fields and charts should be checked after each update.
