Problem–Solution Fit Canvas

Global Fuel Prices & Taxation (2020–2026)

Purpose / Vision — Make global fuel-price and taxation data easier to compare through an interactive Tableau dashboard, helping users explore regional patterns and changes over time.

1. CUSTOMER SEGMENTS

Who would use this project?

- Students and researchers studying fuel prices and taxation.
- Policy analysts comparing regions and income groups.
- People interested in international petrol, diesel and LPG price patterns.

6. CUSTOMER CONSTRAINTS

What makes the task difficult?

- Fuel-price information can be difficult to compare across countries and regions.
- Different fuel types, dates and tax values require consistent interpretation.
- Users may have limited time or experience with data-analysis tools.

5. AVAILABLE SOLUTIONS

What alternatives exist?

- Excel sheets and static charts: familiar, but comparisons can be manual.
- Online price or tax reports: useful, but may show only selected locations or dates.
- Separate country statistics: can be difficult to compare in one place.

2. JOBS-TO-BE-DONE / PROBLEMS

What does the user need to understand?

- Compare average petrol, diesel and LPG prices by region.
- Review fuel-price changes from 2020 to 2026.
- Compare average petrol prices by income level.
- Explore tax percentages and their relationship with petrol prices.

9. PROBLEM ROOT CAUSE

Why is the problem present?

- The dataset contains multiple measures across countries and dates.
- Raw rows do not immediately show regional differences or trends.
- Without consistent aggregation and visual comparison, patterns can be harder to identify.
- Taxation and petrol price may vary together, but a chart alone cannot prove causation.

7. BEHAVIOUR

What do users currently do?

- Filter or sort spreadsheet rows to find values.
- Compare reports and charts from different sources.
- Use manual calculations or summaries to explain differences.
- Share screenshots or static tables when presenting findings.

3. TRIGGERS

- A project review or presentation is due.
- A user wants to compare a region, fuel type or time period.

4. EMOTIONS: BEFORE / AFTER

Before: unsure where patterns are or how to compare figures.
After: better able to explore the charts and communicate observations.

10. YOUR SOLUTION

Tableau workbook with eight worksheets and a story/dashboard view.

- Global petrol-price map
- Regional petrol, diesel and LPG comparisons
- Fuel-price trend from 2020–2026
- Fuel taxation comparison
- Petrol price by income level
- Taxation versus petrol price

Users can explore labels, sort charts and use Region / Income Level filters.

8. CHANNELS OF BEHAVIOUR

8.1 ONLINE
Open the Tableau workbook, interact with dashboard filters, and review the visualizations on screen.

8.2 OFFLINE
Discuss the dashboard in a class or project review; use an exported PDF or image when a static summary is needed.
