Dashboard Design

Date	27 October 2026
Team ID	Individual
Project Name	Global Fuel Prices & Taxation (2020-2026)
Maximum Marks	5 Marks

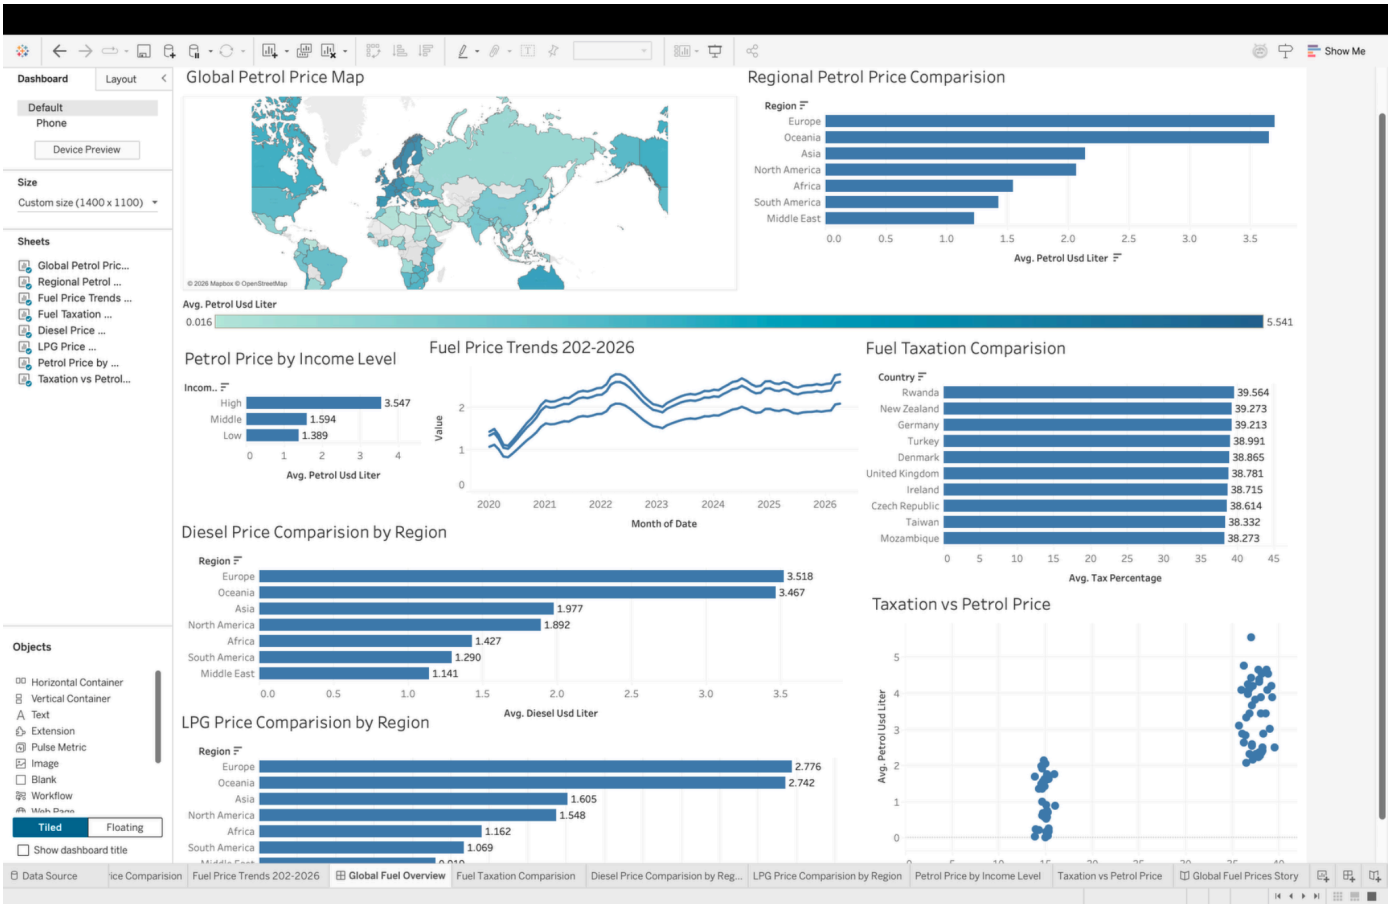

A clear dashboard helps users compare fuel prices across regions and countries, explore changes over time, and examine how taxation relates to petrol prices. The Global Fuel Prices & Taxation dashboard uses a consistent layout and interactive Tableau views to make these comparisons easier to understand.

Activity 1: Interactive and visually appealing dashboard

The dashboard combines a global price map, regional comparison charts, a time-series view, and a scatter plot. Design considerations include:

- Clear and intuitive layout with related charts grouped together
- Appropriate visualizations for geographic, regional, trend, and relationship questions
- Consistent blue colour palette and readable labels
- Interactive Region and Income Level filters where available
- Country-level detail through map marks and chart tooltips
- Dashboard layout designed to keep comparisons visible at once
- Chart titles and axis labels that identify each measure clearly
- Use of a map and multiple chart types to support visual exploration

Global Fuel Prices & Taxation - Dashboard

Major observations from the dashboard:

- Regional prices: Europe and Oceania have the highest average petrol and diesel prices among the regions shown; the Middle East is lower in these comparisons.
- LPG prices: Europe and Oceania also lead the regional LPG comparison, while the Middle East has the lowest average in the chart.
- Income level: The displayed average petrol price is highest for the High income group, followed by Middle and Low income groups.
- Taxation: The country comparison shows tax percentages clustered near the upper end for the listed countries, with Rwanda at the top of the displayed ranking.
- Time trend: The fuel-price trend rises into 2022, falls around 2023, and then recovers through 2024-2026 in the displayed series.
- Tax and petrol price: The scatter plot shows two visible clusters in the data; this chart alone does not establish that higher taxation causes higher petrol prices.

Activity 2

Publish the Global Fuel Prices & Taxation dashboard on Tableau Public and paste the public dashboard link below.
